SATURATOR AND BALANCE LINE

ATEX 

mod. 152 3" , 165 , 181 EN-P and 197 EN - P

application:

the saturation of the steam inside the tank is necessary for fire prevention.

This saturator together with the bubbler tank help to comply with Directive 2014/34/EU and the Ministerial Decree of 07/31/1934 where first degree safety devices with saturation are explicitly required.

Especially in the presence of liquids classified as category A and B, i.e. with a flash point below 65°C.

Chemical compatibility:

- all traditional fuel liquids without additives
- PTFE version for special fuels, solvents or weak chemicals.
- SS version for particularly aggressive solvents, acids, bases
