

FLEX HOSE HT 900_hs

HOSES › *Specific flexible hoses for engine test rooms*

Flexible hose in technical fabric resistant to very high temperatures up to peaks of 900° C. Made up of a double layer of fabric: the first in VERMICULITE SILICA, the second intermediate in INCONEL GLASS.

COLOR: GREY.

Structure entirely hand-sewn.

The external metal spiral is protected by a yellow heat-resistant tape.

The ends of the tubes are packaged without a metal spiral, otherwise called end sleeves, in order to have a greater seal on manifolds or connection sleeves. Particularly suitable for their excellent tensile strength.

Mastertubi.it/q?380

WORKING TEMPERATURE: -60° +900°C

DIAMETERS FROM Ø 102 TO Ø 1200 mm

Theoretical bending radius 1 x internal Ø

Operating depression from 500 to 300 mmWS / mmWG

Operating pressure from 3 to 0.75 KPa

Available with hooks or suspension rings (optional)

FLEXIBLE HOSE SUITABLE FOR THE DELIVERY AND SUCTION OF HOT FUMES, ENGINE EXHAUST GAS, SUPERHEATED AIR.
